Tactics and Sequences – In Logics of Worlds
By Shomit Sirohi

The transcendental interpretation of in fact the minimal becoming maximal – that there is a subject which is a subjective praxis which means that a non-principal becoming principal is just the speaking of a practice, and is disjoined, parallelist and converging on the axis of Cuba at the moment – which is then the victory by take of which international line wins.

I. Two-Fold Investigation and Ontological Inquiry

When the praxis is weak, it asks for a weak interpretation – that in fact it is a mass line, which is dispersed, I call this bird's eye perspective. A weak contradiction, in difference, position and correlation of forces which means the difference of a man and another man, or woman their position and correlation of forces, which then is a structuralism and means that it can be a weak response, and is also psychoanalytic, like a metonymic slide, of Mallarme which is a throw of dice that abolishes chance, a chance affair. It also means that psychoanalysis is finally a law of contradiction, which is elliptical – in Paul Celan it means it is a matheme. Its failure is a love failed, but also pure structure, like a university job.

II. Strong Contradiction and Determination, force and limit, even finally scission or violence.

If the difference, position and correlation of forces is finally determined by a force of language, and limited, or self-limited like a Nietzschean acting jump – it forces the masses into action and is a strong contradiction that is destructive on the structure and is the big Other being destroyed – this extimacy of the Symbolic and is also finally May 68.

III. Destruction, Repetition and Splace, Offsite

The man is destructive, or in a daily repetition forcing in the splace (neighbourhood, city, region, state or nation) which then the sequence – offsite which is in an arrow, or finally appointed – A, Ap.
